

(a) ISA targets (Rust core; the byte-level claim)

ISA	runner	build	byte-id. K	binary-CT
x86-64	Linux, Win-MSVC	✓	✓ (run)	✓ Memcheck
aarch64	Linux, macOS	✓	✓ (run)	✓ Memcheck
wasm32	node	✓	✓ (run)	source-CT
riscv64	qemu-user	✓	✓ (run) [‡]	source-CT
thumbv7em	bare-metal	✓	by constr. [†]	n/a

[‡] run under qemu-user (reference-vector KATs pass byte-identically);
[†] cross-compiled; identity from FIPS-deterministic encodings + source.

(b) native ABI 2 product workflow (current source)

Face	host	device	status
C ABI	macOS	n/a	✓
Swift	macOS	iOS/iPadOS	✓ (diag.)
Kotlin (JVM/FFM)	JDK 22+	n/a	pending
Android/JNI	macOS build	Android	pending

✓ = verified; Swift/device is a current-source dirty diagnostic. Clean release provenance remains pending.
